cruise no 126 of the albatross iii was planned and conducted to gather information about the distribution of fishes across the continental shelf from nantucket shoals to cape hatteras during the late winter period when water temperatures generally are at their minimum the shelf here has a general hydrographic similarity from north to south well described by bigelow 1933 that makes it a particularly worthwhile area in which to study the relation of fish distribution to water temperature depth and other factors of the environment since the
